Task Description#2 (Loops)

- Ask AI to generate test cases for assign_grade(score) function. Handle boundary and invalid inputs.
- **Requirements**
- AI should generate test cases for assign_grade(score) where: 90-100: A, 80-89: B, 70-79: C, 60-69: D, <60: F
- Include boundary values and invalid inputs (e.g., -5, 105, "eighty").

Expected Output#2

Grade assignment function passing test suite

PROMT:

write a python code

for assign_grade(score) function. Handle boundary and invalid inputs.

Requirements

- AI should generate test cases for assign_grade(score) where: 90-100: A, 80-89: B, 70-79: C, 60-69: D, <60: F
- Include boundary values and invalid inputs (e.g., -5, 105, "eighty").

CODE:

```

Welcome task1.py 1 task2.py
task2.py > ...
1 def assign_grade(score):
2     try:
3         # Check if input is None or empty string
4         if score is None or str(score).strip() == "":
5             return "Invalid input: score cannot be empty."
6
7         # Try converting to float
8         score = float(score)
9
10        # Check if score is within valid range
11        if score < 0 or score > 100:
12            return "Invalid score: must be between 0 and 100."
13        elif score >= 90:
14            return "A"

Task Description#3

- Generate test cases using AI for `is_sentence_palindrome(sentence)`. Ignore case, punctuation, and spaces

Requirement

- Ask AI to create test cases for `is_sentence_palindrome(sentence)` (ignores case, spaces, and punctuation).
- Example:
"A man a plan a canal Panama" → True

Expected Output#3

- Function returns True/False for cleaned sentences
- Implement the function to pass AI-generated tests.

PROMPT:

Write a python code for `is_sentence_palindrome(sentence)`. Ignore case, punctuation, and spaces

Requirement

- Ask AI to create test cases for `is_sentence_palindrome(sentence)` (ignores case, spaces, and punctuation).

- Example:
"A man a plan a canal Panama" → True.

CODE:

```
Welcome task1.py 1 task2.py task3.py X
task3.py > ...
1 import string
2
3 def is_sentence_palindrome(sentence):
4     # Remove punctuation and spaces, and convert to lowercase
5     cleaned = ''.join(
6         ch.lower() for ch in sentence if ch.isalnum()
7     )
8     return cleaned == cleaned[::-1]
9
10 # Dynamic input
11 if __name__ == "__main__":
